

CARAVAN

Passenger Conversion: Seating Kit

FAA / PMA Approved (STC ST00026AT)

This STC is applicable to the Cessna 208, 208A and 208B

Change your cargo from parcels to passengers

Atlantic Aero's Passenger Conversion STC Kit allows for two (2) crew seats and eight (8) passenger seats in the 208 & 208A and up to nine (9) passenger seats in the 208B. Removing the cargo barrier, the side closeout nets and partition assemblies and installing the seats on the rails in the floor of the aircraft accomplish the installation. Also, an inside door handle replaces the existing spindle on the upper aft cargo door.

Several seating configurations are available and the "pitch" or spacing between the seats is up to 36" depending on the configuration you choose. This rivals standard airline comfort and legroom. With the Passenger Conversion Kit installed, your aircraft can be easily configured back to cargo operations by removing the seats and reinstalling the cargo barrier, nets and partitions. This flexibility can prove to be very beneficial for any operation.
